Test Name	Result	Units	Flag	Reference Range/Cutoff
SARS-CoV-2 Antibody Immunoassay IgM				<i>Run by AY on 9/28/2020 2:01:05 PM</i>
SARS-CoV-2 IgM			Not Detected	
SARS-CoV-2 Antibody Immunoassay IgG				<i>Run by AY on 9/28/2020 2:01:05 PM</i>
SARS-CoV-2 IgG			Not Detected	
				<i>Run by ~IS on 9/28/2020 11:41:42 AM</i>

Antibodies to SARS-CoV-2 will be produced if a person had COVID-19 or if an individual had an asymptomatic or mild infection with SARS-CoV-2. These tests have not been FDA cleared or approved. These tests have been authorized by FDA under an EUA for use by authorized laboratories. These tests have been authorized only for the presence of IgG and IgM antibodies against SARS-CoV-2, not for any other viruses or pathogens. These tests are only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of in vitro diagnostics for detection and/or diagnosis of COVID-19 under Section 564 (b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner. Negative results do not rule out SARS-CoV-2 infection, particularly in those who have been in contact with the virus. Follow-up testing with a molecular diagnostic should be considered to rule out infection in these individuals. Results from antibody testing should not be used as the sole basis to diagnose or exclude SARS-CoV-2 infection or to inform infection status. Positive results may be due to past or present infection with non-SARS-CoV-2 coronavirus strains, such as coronavirus HKU1, NL63, OC43, or 229E.
